

Quickstart: Install the Data Center Python Package

Philip Schwedler
SAFE Research Data Center*

Last Update: April 20, 2023

In this guide we will show you how to install the Data Center Python package and connect to your SAFE OneDrive, Personal OneDrive or Personal Dropbox account.

Contents

1	Contact	1
2	Installation	2
3	Connecting and Examples	2

1 Contact

If you encounter any difficulties or just want general information, do not hesitate to contact us.

SAFE Research Datacenter: datacenter@safe-frankfurt.de

For more information about the SAFE Research Data Center, please visit our [website](#), and our [intranet site](#).

*schwedler@safe-frankfurt.de

2 Installation

Download the the package from the [Data Center intranet site](#) (only accessible via the university network or VPN). Save and unpack these files in a `LOCAL_PATH` of your choice. Now open your Anaconda or Command terminal (wherever `pip` is installed) and enter

```
1 pip install "LOCAL_PATH\safe_datacenter-main"
```

The screenshot shows the Anaconda Prompt (anaconda3) window. The command `pip install "C:\Users\PhilipSchwedler\Downloads\safe_datacenter-main"` has been executed. The output shows the package being processed, metadata prepared, wheels built, and the package successfully installed. The final output is `Successfully installed safe-datacenter-0.1.0`.

If you encounter errors like

```
1 ImportError: No module named <package_name>
```

please go to pypi.org, search for the corresponding `<package_name>` and run it, e.g. for package `httpx`,

3 Connecting and Examples

We have provided so-called Quickstart examples on the [Data Center Intranet site](#), which show you connection examples as well as examples for downloading and uploading data. Please also have a look at our package documentation there.
